1️⃣ Early Confidence & Leadership (School Phase)

Meri story shayad sunne me bahut dramatic na lage, lekin shuruaat se hi main hamesha apne kaam me serious aur focused raha hoon. School ke time par main academics ke saath-saath activities me bhi active tha. 9th aur 10th standard me mujhe **Green House Captain** banaya gaya, jahan leadership aur responsibility ka pehla real experience mila. College aur school dono jagah mujhe har activity me appreciate kiya gaya, jo mere liye ek strong confidence boost tha.

2️⃣ Academic Setback & Self-Acceptance

Lekin sab kuch smooth nahi tha. Kuch distractions ki wajah se main apne main stream subject **science** me weak ho gaya aur sirf **39%** score kar paaya. Is point par zyada students demotivate ho jaate hain, lekin maine khud ko judge nahi kiya. Mujhe clearly pata tha ki meri real strength **Computer aur IT** me hai, jahan maine **94%** score kiya. Baaki subjects me average 50% ke aas-paas the, lekin main apni weakness aur strength dono ko honestly accept kar chuka tha.

3️⃣ Risky but Calculated Decision (11th–12th Science)

Mujhe pata tha ki agar mujhe engineering karni hai, toh science lena hi padega. Isliye maine 11th aur 12th me science choose ki — ek aisa decision jo zyada log lene se darte hain. Maine **Maths aur Biology dono** ko main subjects ke roop me liya. Mera logic simple tha: agar main Maths ko thoda sambhaal loon, toh Biology me main apne aap ko confident maanta tha.

4️⃣ Smart Strategy Over Perfection

Bina kisi coaching ya tuition ke, maine Biology me lagbhag **55 marks** score kiye. Maths me calculus aur integration mere liye kaafi tough the, isliye maine apni strategy change ki. Maine **Statistics aur Probability** par focus kiya, kyunki mujhe pata tha ki exam me 45 questions sirf isi section se aate hain. Jo questions maine attempt kiye, wo almost sab correct the, aur isi approach ne mujhe engineering ke liye **eligibility cross** karwa di.

5️⃣ Drop Year That Built the Foundation

Engineering eligibility ke baad bhi mujhe admission ke liye **one year drop** lena pada. Lekin maine is time ko waste nahi kiya. Pehle 2 mahine maine local institute se **advanced computer concepts** clear kiye. Baaki time me maine **Machine Learning aur AI/ML** padhna shuru kiya, lekin wahan mujhe zyada clarity nahi mili. Iske baad maine online resources se ek **proper roadmap follow** kiya, jisne mere core concepts ko bahut strong bana diya.

6️⃣ Self-Learning, Projects & Security Mindset

Is phase me maine development aur machine learning ke **minor projects** execute karne shuru kiye. Saath hi maine **Security aur Penetration Testing** bhi padhna shuru kiya, taaki main samajh sakun ki software systems ke weak points kaise exploit hote hain aur data leaks kaise hote hain. Maine remotely **Master's of Academy** jaise platforms se self-learning continue rakhi, tab tak jab tak college ka admission time nahi aa gaya.

7️⃣ Structured Guidance & Real Projects (College Phase)

College me admission ke baad, ek **LLP company** humare college aayi jo Data Science aur Machine Learning par focused thi. Unhone hume ek clear roadmap diya ki AI, ML aur Data Science me kaise build-up karna hai. Yahan maine Data, Cloud, Machine Learning, Deep Learning, Data Analytics aur

Statistics & Probability par kaafi kaam kiya. Lekin main sirf ek source par depend nahi tha — mujhe real-world kaam karne ki curiosity thi.

8️⃣ Freelancing & Problem Solving Mindset

Isi curiosity ke saath maine apna **freelancing work** start kiya. Local vendors aur customers ke requirements ke according main **Python-based solutions aur software** develop karta raha. Yeh phase mere liye real exposure ka tha, jahan maine business problems ko technical solutions me convert karna seekha.

9️⃣ EdTech Journey: Teaching + Scaling

Baad me maine ek **EdTech startup** ke saath kaam shuru kiya, jahan mujhe projects mile, earnings aur certificates bhi mile. Mera unke saath **3 saal ka contract** raha. Is dauraan maine data aur AI solutions execute kiye, students ko **remote sessions** me padhaya, aur sales team ke saath milkar unka system improve kiya. Pehle jahan students kam aate the, wahan system migration, storage aur capacity increase ke baad demand itni badh gayi ki seats kam padne lagi.

🔟 Collapse & Learning From Failure

Lekin 3 saal baad company ke internal issues ki wajah se leadership ne owner ke saath cheating ki aur company bankrupt ho gayi. Maine pehle intern ke roop me join kiya tha, phir associate trainee aur phir full-time employee bana. Company ka naam confidential rakhna chahunga, kyunki yeh founder ki request thi. Yeh phase emotionally tough tha, lekin maine yahan se bhi bahut kuch seekha.

1️⃣1️⃣ Short Corporate Phase & Reality Check

February 2025 ke baad maine **Insightrix Consulting Pvt. Ltd.** join ki. Mujhe wahan ka kaam pasand aaya, lekin meri medical condition ki wajah se main required hours consistently serve nahi kar paaya. Projects time par deliver kiye, phir bhi do mahine ke andar mujhe company chhodni padi.

1️⃣2️⃣ Agentic AI Vision in Construction

Iske baad maine **MEP QS Service** join ki — ek non-registered construction startup. Yahan goal tha ek **Agentic AI system** banana jo construction projects ke escalation, sustainability, cost estimation aur decision-making ko data ke basis par automate kare. Maine 6 mahine tak **Junior Data Scientist** ke roop me model training aur frontend development par kaam kiya. Company ne kaha ki registration aur project execution ke baad mujhe wapas bulaya jaayega.

1️⃣3️⃣ Decision to Go Independent

Is point tak aate-aate main interviews se thak chuka tha — 5, 6, kabhi 8 rounds ke baad bhi sirf yeh sunna ki “we’ve moved ahead with another candidate” ya “hiring on hold”. Is frustration ne mujhe ek decision lene par majboor kiya: **apna khud ka kaam start karna**. Friends aur family ke support ke saath maine decide kiya ki main apne projects aur services **affordable pricing** par deliver karunga, taaki market ke unfair margins aur agent spines ko break kar sakun.

mera story kuch khass nahi hai maine apne career ke starting se hi top performer rha hun college mei har ek activity mei appreciate kiya gya hun also mai toh Green House captain tha apne school for in the last 2 year 9th standard or 10th standard mei, but however some distraction bring mei to weaker in my main stream subject and i scored in science only 39% even though maine hesitate nahi kiya in marks ko dekh ker balki mujhe jis chiz mei interest tha woh computer and IT jisme maine score kiya tha 94% and other subject on average 50% with this mujhe pta tha main science mei weak but mujhe yeh bhi malum tha agar mujhe engineering krni hai toh mujhe science padhna padega or maine 11th or 12th mei science liya interestingly kisi bhi student mei yeh dare nahi hota hai ki woh Maths or Biology dono subject select kare as a main stream but however i decided ki agr math properly kerleta hun toh biology subject ke liye mai confident tha or result begair coaching or tution ke maine score kiya bio mei approx 55 and mathematic ka mujhe malum tha calculus or integration toh jaan kha rha tha toh maine focus kiya statics and probability pe or happily maine jitne question kiye the woh sare proper correct the and all of that question help to secure mei 45 Number because only 45 number of question contains stats or probability, so maine yha toh eligibilty cross krliya engineering ka ab waqt aya mujhe admission but however mujhe one year dropout krna pada toh maine yeh waste na krke maine local institute se apne advance computer ke concept ko clear kiya 2 mahin or baki ke waqt maine local coaching se machine learning and AI/Ml padhna chalu but kuch khass sikhaya nahi gya waha toh maine online source se start kiya or mai properly roadmap follow jisne mere core concepts ko clear krne bhut kick diya or maine minor project related to developement and machine learning excute krne laga sath hi maine security & penetration testing ko padhna chalu kiya taki mai smj saku ki kiya kiya posibility hota hai jo ek software weaker point rakhta hai kisi bhi online leak or data sensivity ko hacker ke thorugh use hota hai jo woh hack krlete toh maine remotely master's of academy se self learn kiya itna time tak mre college ka admission time aagya or enroll krliye after 1st an LLP company jo Data science and machine learning ko padha rhi thi woh humare college mei ayi or humei ek proper road map diya ki hum kaise build-up kr skte hai apne ap ko AI and ML ke field mei along with Data science and Machine Learning yha maine bhut sare projects and study kiya jisma Data, cloud, Machine Leanring, Deep learning , data Analytics and Stats and probability aur mai sirf issi source pe depend nahi tha mujhe curiosity thi kaam krne ki toh maine khudse ek freelancing platform chalu kiya jaha mai local vendor or customers ke requirement ke according python based solution or softwares bana ke dete gya unhe aur issi trha maine kaafi time tk kaam kiya or phir maine ek sourced company join kiya jo ki ek ed tech company thi startup ya phir kehlijye app ki intially start hua tha unhone mujhe project dilaya or badle mei mujhe earnings or certificate provide kiya for 3 years i have contract with them and as contract they hired mei and i work on my flexibility and with this i executed data and ai solution projects, yahi nahi maine remote sessions bhi liye hai students ke as class teacher for that edtech company, also maine is edtech company ke maine sale team ko pathway ke sath development krwaya jaha student kuch hi ate waha mere solution or team ke efforts se students ke liye seat nahi hone ka issue hone lga humne net site pe migrate kiya storage and capacity ko increase so that hum kaam time jada bachon ko serve kr paye issi trha meine 3 saal tak is company ke serve kiya at the end so of the companies-leader made cheat with the owner and they runaway and institute become banrupt after 3years, so i joined as intern move to the associate trainee and then moved to full time employee in this company so i dodnt want release company name owner and founder request to bring it confidential so after feb 2025 i joined insightrix consulting private limited, i really enjoyed in that company for 3 month of contract in that company but somehow my medical problem doesn't allow me serve as required number of hour mandatory for that company i really deliver my project on time but my project in that company was literally make me wrong and that's only reason i think led me to out from that company and within two month i was out from this company, and after this i joined MEP QS Service which non registered construction startup company woh chahte the ki ek agentic ai banaya jay jo construction project ke esclation or requirent or sustanibility ke according project ke price or

estimate ko project ke facility or management ke according set kre or provide kre Quantity surveyours or project estimation engineers yeh ek aisa project hota jo ki purane data ke according problems or causes and issue ko findout krta hai or reminder ke trha engineers ko provide krta jisse decision data ke basis pe hota or client proficeintly kab kiya hoga kis site or construction pe usko client ko provide kr pata , is project maine model train or some forntend developemnt mei maine 6 month serve kiya as junior data scientist but however this company is non registered so they said that after registration or executed our project sucessfully they bring me back, So now i am decided run my own esclation of project as i was frusted of attending 5 to 6 7 8 round of interview just to hear we have decided to move forward with other candidate or our hiring process is on hold, all this message bring me up from naukri or job and i found multiple of source and help from our frinds and families to esclate my own project for desired client or customer at affordable or cheap price so i can break market prices or agent spines

mujhe isko padhna h thoda acha se scene wise parts or paragraph ko divde krona
